PROIZVODNJA, PRODAJA I ZALIHE ŠUMSKIH SORTIMENATA U BIH PREMA ASORTIMANU U 2013. GODINI

PRODUCTION, SALES AND STOCKS OF FOREST ASSORTMENTS IN BOSNIA AND HERZEGOVINA IN 2013

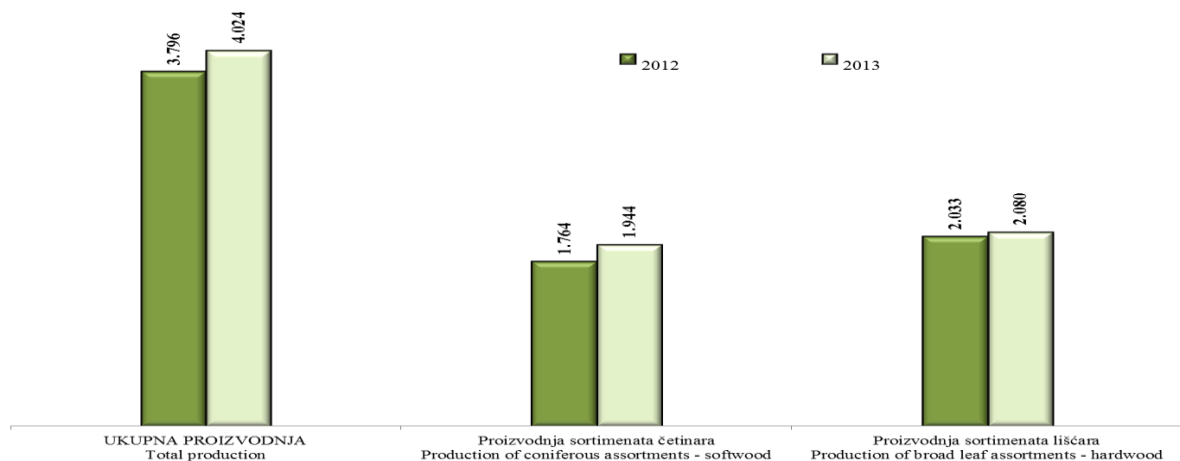

Ukupna proizvodnja šumskih sortimenata u Bosni i Hercegovini u 2013 god. veća je za 6,00% u odnosu na 2012 god. Proizvodnja sortimenata četinarskih vrsta drveća povećana je za 10,24% dok je proizvodnja sortimenata lišćarskih vrsta veća za 2,32%. Proizvodnja trupaca četinarara povećana je za 6,77% dok proizvodnja trupaca lišćara bilježi rast od 4,88%. Najveći rast proizvodnje od 38,20% u odnosu na 2012 godinu zabilježen je kod prostornog drveta četinarara. Rast proizvodnje zabilježen je i kod janskog drveta četinarara od 11,08% i kod ogrijevnog drveta lišćara od 5,38%. Pad proizvodnje zabilježen je kod ostalog dugog drveta lišćara u visini od 8,09% te u proizvodnji janskog drveta lišćara od 24,97%, u proizvodnji ogrijevnog drveta četinarara 33,66% i u proizvodnji prostornog drveta lišćara od 37,23%. Najveći pad proizvodnje je kod ostalog dugog drveta četinarara od 80,75%. Visoki pad u proizvodnji djelomično je posljedica preklasifikacije u druge sortimente.. Kod proizvodnje ostalog grubo obrađenog drveta radi se o malim količinama sortimenata čije značajno variranje u proizvedenim količinama nema uticaja na promjene u ukupnoj proizvodnji šumskih sortimenata.

Total production of forest assortments in Bosnia and Herzegovina in 2013 has increased for 6,00% compared to 2012. The production of coniferous (softwood) assortments is, for 10,24% higher while the production of broadleaf (hardwood) assortments increases for 2,32%. Production of coniferous logs is 6,77% higher while production of broadleaf logs records increase of 4,88%. Highest production increase, of 38,20% compared to 2012 has been recorded in production of coniferous cordwood. Production increase has also been recorded in coniferous mining wood, of 11,08% and in broadleaf fuelwood of 5,38%. Production decrease have other broadleaf long wood in a level of 8,09%, broadleaf mining wood of 24,97%, coniferous fuelwood in a level of 33,66% and broadleaf cordwood of 37,23% respectively. Highest production decrease has other coniferous long wood of 80,75%. High production drop is partially consequence of assortments pre-classification. Other roughly worked wood is produced in small quantities and its periodical significant changes in produced quantities do not affect variations in total production of forest assortments.

Metodološka objašnjenja

Podaci o proizvodnji šumskih sortimenata, obrađeni u ovom saopštenju, urađeni su na temelju rezultata obrade entitetskih zavoda za statistiku iz redovitog mjesečnog istraživanja.

Mjesečne izvještaje podnose sva poduzeća koja se bave stalnom proizvodnjom šumskih sortimenata iz šuma u državnoj svojini, bez obzira da li im je iskorištavanje šuma temeljna ili sporedna djelatnost.

Podacima je obuhvaćena samo proizvodnja šumskih sortimenata iz državnih šuma, dok šumski sortimenti proizvedeni u šumama na koje postoji pravo svojine nisu uključeni.

Iskazane količine predstavljaju neto drvenu masu sortimenata izraženu u zapreminskim metrima.

Četinari su vrste drveća iz klase golosjemenica (Gymnospermae), pretežno iz porodice Pinaceae. Ovdje spadaju autohtone, komercijalne vrste drveća kao što su jela (*Abies alba*), smrča (*Picea abies*) te bijeli (*Pinus sylvestris*) i crni bor (*Pinus nigra*). Drvo četinarima ima jednostavniju građu i u međunarodnoj klasifikaciji se, bez obzira na mehanička svojstva označava nazivom *softwood*.

Lišćari su vrste drveća iz klase skrivenosjemenica (Angiospermae). Ovdje spadaju autohtone, komercijalne vrste drveća lišćara kao što su: bukva (*Fagus sylvatica*), hrast kitnjak (*Quercus petraea*) te vrste plemenitih lišćara iz rodova *Fraxinus* (jasen), *Acer* (javor), *Ulmus* (brijest) i *Prunus avium* (divlja trešnja) i ostalih tvrdih i mekih lišćara. Drvo lišćara je složenije građe u odnosu na drvo četinarima i u međunarodnoj klasifikaciji se, bez obzira na mehanička svojstva označava nazivom *hardwood*.

Trupci su šumski drveni sortimenti odgovarajućih fizičkih i mehaničkih svojstava, namijenjeni za dalju mehaničku preradu (piljenje, rezanje ili ljuštenje).

Jamsko drvo obuhvata šumske drvene sortimente povoljnih fizičkih i mehaničkih svojstava čiji se prirodni oblik, dimenzije i svojstva koriste za izgradnju i održavanje jamskih kopova i rudarskih okna. Može se upotrebljavati i za krovne konstrukcije.

Ostalo dugo drvo obuhvata tehničko drvo čiji se prirodni oblik, dimenzije i svojstva koriste za proizvodnju TT stubova, stubova za skele, šipova, jarbola i sl.

Prostorno drvo obuhvata drvo lošijih tehničkih karakteristika, oblo ili cijepano koje se koristi u hemiskoj preradi za proizvodnju celuloze, drvenjače, drvene vune, tanina i sl.

Ogrijevno drvo je drvo namijenjeno neposredno za ogrijev ili proizvodnju drvenog uglja.

Ostalo grubo obrađeno drvo obuhvata sitno tehničko drvo kao što su stubovi za hmelj ili lozu, motke, kolje, štapovi, ručke, obruči, pletarski štapovi, pruća i sl.

Notes on methodology

The data on production of forest products presented here have been prepared on a basis of data provided by entity statistical offices underlying the regular monthly survey results.

Monthly reports are provided by all companies performing their business activities in the forestry sector and permanently producing forest products.

The data presented here cover only production of forest products manufactured out of the resources from the state-owned forest. Forest products from private forests are not covered here.

The given quantities represent net volume measured in cubic meters

Coniferous are tree species from systematic class of naked-seed plants (Gymnospermae), mostly from Pinaceae tree family. Here belong domestic commercial tree species: european Fir (*Abies alba*), Spruce (*Picea abies*), Scots Pine (*Pinus sylvestris*) and European Black Pine (*Pinus nigra*). Coniferous wood is less complex in structure and in international classification, regardless its mechanical properties, it is classified as *softwood*

Broad leaf are tree species from systematic class of covered-seed plants (Angiospermae). Here belong domestic commercial species: Beech (*Fagus sylvatica*), Sessile Oak (*Quercus petraea*), so cold noble broad leaf trees like species from genera *Fraxinus* (Ash), *Acer* (Maple), *Ulmus* (Elm), *Prunus avium* (Wild Cherry) and hard and soft broad leaf tree species. Broad leaf wood is more complex in structure than coniferous wood and in international classification, regardless its mechanical properties, it is classified as *hardwood*.

Logs are forestry wood products with proper physical and mechanical properties, intended for further mechanical processing (sawing, slicing or peeling).

Mining wood include forestry wood products with proper physical and mechanical properties which natural shape, dimensions and properties are used for construction and maintenance of mining pits. It could also be used for roof constructions.

Other long wood include technical wood which natural shape, dimensions and properties are used for manufacture of utility poles, scaffold poles, foundation poles, masts etc.

Cordwood include wood of bad technical characteristics, round or split, used in chemical processing for production of chemical and mechanical pulp, wooden wool, tannin etc.

Fuelwood is wood intended for heating or production of charcoal.

Other wood, roughly worked is small technical wood like hop and vine poles, other poles, pickets, sticks, handles, wooden rims, brushwood etc.
