GODINA / YEAR VI

SARAJEVO , 25.02.2011.

BROJ / NUMBER 3

POLJOPRIVREDA AGRICULTURE

PROIZVODNJA VOĆA I GROŽĐA U 2010. GODINI

Prema podacima o proizvodnji voća i grožđa u 2010. godini ukupan prinos je smanjen i to: trešanja za 8%, krušaka za 8%, dunja za 13%, oraha za 14%, malina za 7% i grožđa za 10%, dok je ukupan prinos povećan kod kajsija za 15%, badema za 6%, mandarina za 68%, limuna za 39%, smokvi za 7% i jagoda za 5%.

Smanjenje ukupnog prinosa uzrokovano je lošim vremenskim prilikama, a povećanje prinosa uzrokovano je povećanjem prinosa po stablu i prinosa po hektaru.

PRODUCTION OF FRUIT AND GRAPES IN 2010

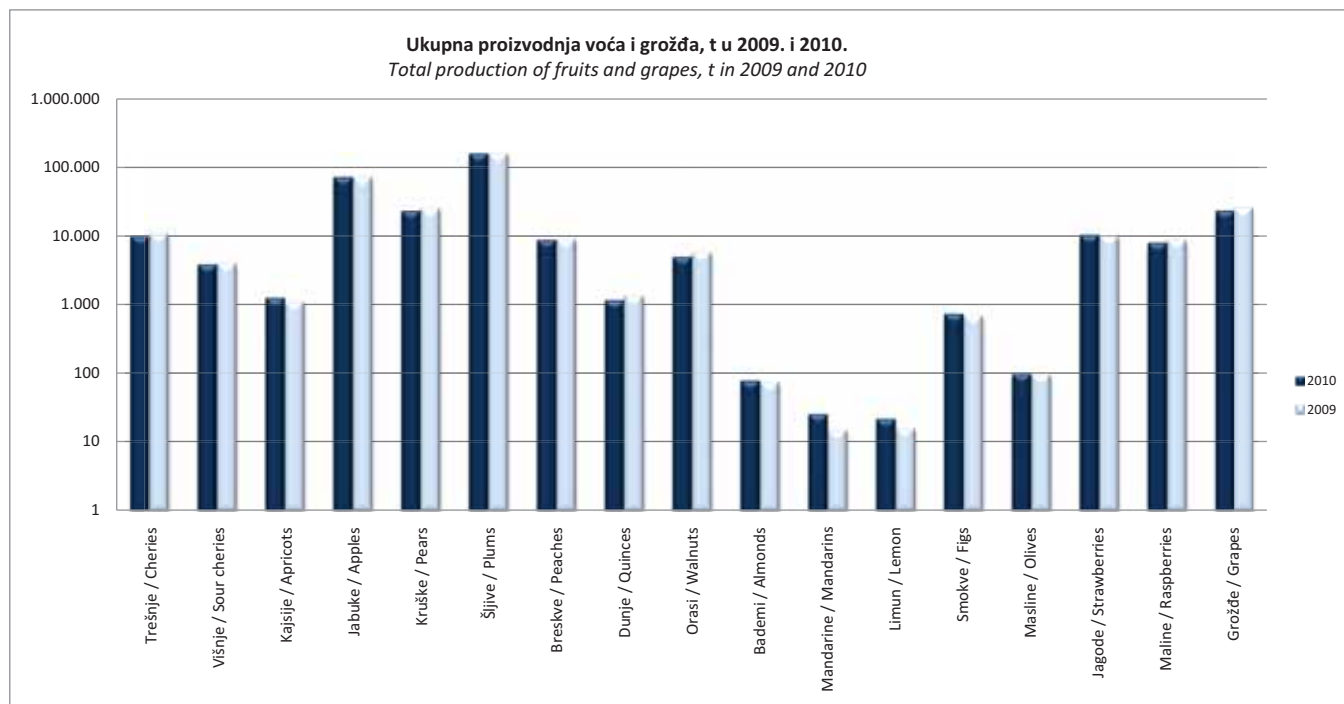

According to fruit and grapes production data in 2010 the total yield decreased as follows: cherries by 8%, pears by 8%, quinces by 13%, walnuts by 14%, raspberries by 7% and grapes by 10%, while the total yield of apricots increased by 15%, almonds by 6%, mandarins by 68%, lemon by 39%, figs by 7% and strawberries by 5%.

The yield decrease is caused by bad meteorological conditions and yield increase is due to growth production per tree and per hectar.

Metodološka objašnjenja

Podaci o proizvodnji voća i grožđa u Bosni i Hercegovini dobijeni su agregiranjem podataka dobivenih redovnim statističkim istraživanjima u entitetskim zavodima za statistiku i Podružnici Brčko. Pravni subjekti dostavljaju podatke na osnovu knjigovodstvene i druge evidencije, dok se za individualna poljoprivredna gazdinstva vrše procjene od strane statističkih procjenitelja po pojedinim općinama.

Definicije

Rodna stabla voća i čokoti vinove loze su stabla, odnosno čokoti koja su prema svojoj fiziološkoj zrelosti sposobni da pod normalnim uslovima za vegetaciju zametnu plod, bez obzira da li su u odnosnoj godini rodila ili ne.

Prinos voća i grožđa je iskazan kao hambarski prinos normalne vlažnosti po odbitku svih gubitaka prilikom berbe i transporta.

Prinosi po stablu-čokotu obračunati su na rodna stabla, odnosno čokote vinove loze.

Notes on methodology

Data on production of fruit and grapes in Bosnia and Herzegovina are aggregated from the Regular statistical surveys conducted by the Statistical Institutes at the level of Entities and Brcko District. Legal entities are submitting data based on book-keeping and other records whereas the municipal statistical estimators are making estimations for the individual households.

Definitions

Trees and vines of bearing age are those trees and vines capable of bearing fruit under standard conditions, regardless of whether or not they beared fruit during reporting year.

Yield of fruit and grapes is shown as the granary yield of standard humidity after deductions all losses during the harvest and transportation.

Yield per tree or per vine is computed for the bearing trees or vine.
